

How to use Liveskies (Version 1.0)

This guide will assist you in broadcasting or viewing live channels using Liveskies (HTML5).

This user guide will undergo updates as improvements and refinements are being made. Keep in mind that the site is in its infant stage and we expect hiccups to occur. Just keep Rock informed so the site can mature into one that is used by all.

p.s. Don't forget donating, so Rock doesn't have to foot the bill alone.

Liveskies

Obtaining a Broadcast Account

Step 1 Visit <https://liveskies.org>

Step 2 Click on **Sign up To Broadcast**

Remember each channel name will have a unique email address

Step 3 Complete the Registration Form

The **Channel Name** and **Username** should be the same with NO SPACES and SPECIAL CHARACTERS in the name

Step 4 Don't forget to check the agreement Rules checkbox and then Click on the red **Create Account** button.

In a couple of Days, Rock will approve your account. If you try to broadcast prior to approval, Liveskies will inform you that approval is still pending.

Broadcasting in Liveskies

Logging into Liveskies

Step 1

Visit <https://liveskies.org>

Step 2

Click on the red **Login** button on the upper right of the window.

A login window will pop up

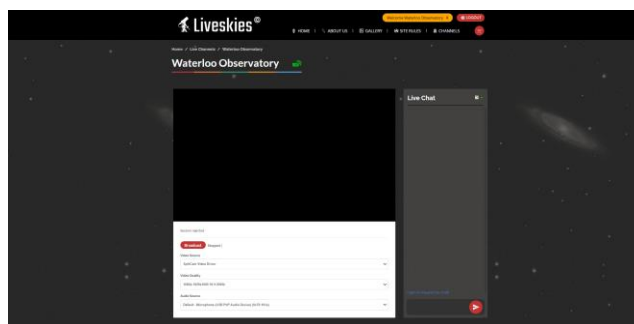

Step 3

Enter both your **Username** and **Password** and click on the red **Login** button.

*You can have **Liveskies** remember your credentials*

When you have successfully logged in, you will be presented with the main display and control window.

*It is from here that you can select your **Video source**, **Resolution**, and **Audio source**.*

Step 4

Video Source

At this point, determine how you would like to broadcast your live video of MallincamSky. I will go into more detail with two options SplitCam and OBS.

I am assuming that you have either SplitCam or OBS running and displaying the active MallincamSky Window. (See below on how to achieve this).

The dropdown list will provide you the current options available to you on your computer (depends upon what software you have installed).

If you have installed the **Directshow** drivers then Mallincam will be added to the list.

*Note: In using **Directshow**, you will see the image of what the camera is observing, but you will need a **Directshow** software (such as **AMCap**) to control most aspects of the camera.*

If you have installed Splitcam (recommended), you will see Splitcam Video Driver in the List.

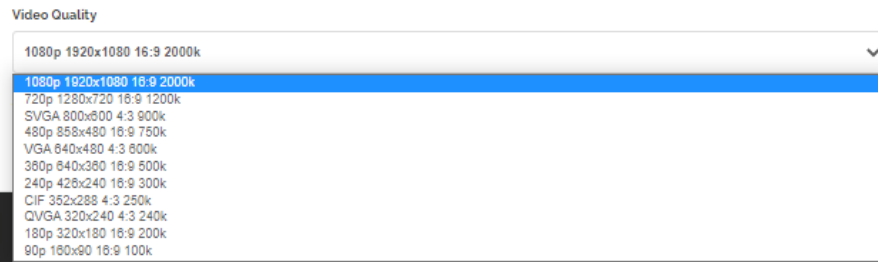

Select your **Video Source**.

Step 5

Video Quality

From the drop-down list select the best resolution your system can handle.

Start with 1080p and see if you can broadcast with this resolution. If you find that your system (internet) cannot handle this level of resolution, just take the resolution down.

Step 6

Audio Source

The drop-down list will indicate what current audio devices you have available on your computer. Choose the one which provides the best sound quality.

This section explains how to Capture and Broadcast Using either SplitCam or OBS

You will want to stream the **MallincamSky** image to the **Liveskies** server. I will give procedure for two of many options. Once you have activated your option of choice, just bring the **MallincamSky Window** up front so you can control it. If you have multiple monitors, you can leave **Liveskies** and **MallincamSky** each on its own monitor, so they are available to control.

Step 1

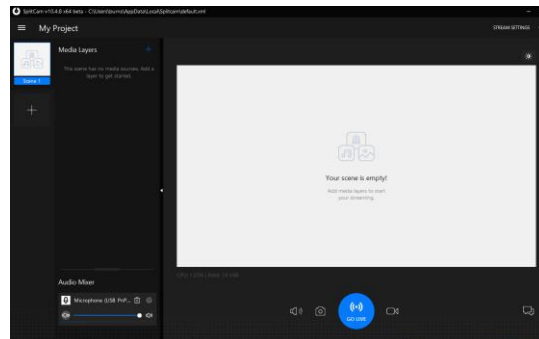

Using SplitCam (either visit Mallincam.net or splitcam.com)

Start MallincamSky and connect to your camera

Step 2

Start Splitcam (I will illustrate with the latest version)

Click on the blue **+** beside **Media Layers** to select what part of the screen you would like SplitCam to capture.

The new window will offer you many choices, but the two best choices will be either **Share Screen** or **Share Window**.

- **Share Screen** allows SplitCam to capture the whole screen
- **Share Window** allows SplitCam to capture only a specifically running piece of software (such as MallincamSky). We recommend using **Share Window**.

When **Share Window** is selected, a drop-down box will provide a list of currently running programs

Choose **MALLINCAMSKY**

You will now have SplitCam displaying the **MallincamSky's** window in its display window

I recommend setting the resolution to **1920 x 1080** in SplitCam's **General Settings** (the 3 horizontal lines beside **My Project** in the SplitCam screen).

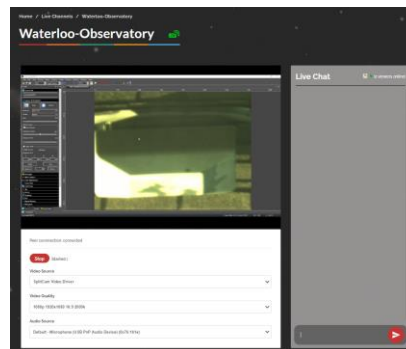

Broadcast to **Liveskies**

On the **Liveskies** window, click on the red **Broadcast** button

If everything connects correctly, you will see "**peer connection connected**" at the top of the Video source window (the **Broadcast** button will change to a **Stop** button).

On the right-hand side of the **Liveskies** window you will see a **Live Chat** box. If is from here that you will be able to Chat and see responses from other viewers in real time. Just type in you message and hit the red button to the right of your message to send it.

When you are finished with your session, just click on the red **LOGOUT** button at the top of the **Liveskies** screen, then shutdown SplitCam and **MallincamSky**.

To control **MallincamSky**, just bring it to the front. If you have a small sized monitor, you may want to reduce the size of the **MallincamSky** window so you can also view the **Liveskies** window and participate in the chat process.

Having multiple monitors gives options of placing the **Liveskies** window on one monitor while **MallincamSky** is on the other monitor.

Using OBS (Open Broadcast Software) – This is a more challenging process to initially setup

Step 1 Start **MallincamSky** and connect to your camera

Step 2 Start **OBS**

Step 3 Click on the **+** in the **Sources** box to select a source for **OBS**

A new Window will open up where you can select from a list of possible sources.

*Two two best choices are **Display Capture** and **Window Capture**.*

*We recommend **Window Capture**.*

When the selection window appears, use the dropdown list to select **MallincamSky**.

You will see the **MallincamSky** screen in **OBS's** display

Step 4

Click on the **Gear** symbol in the **Mic/Aux** box and then select **Properties** to choose a microphone for broadcasting from the drop-down list. (you can test the microphone by speaking and watching the green level bar change)

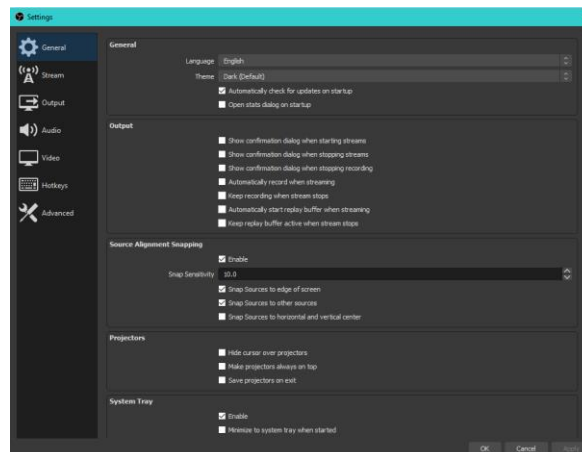

Step 5

Now click on the **Settings** tab in the **Control** box.

This will open-up the output selection for OBS

We want to **Stream** the MallincamSky Window, so Select **Stream** from the selection on the left column.

OBS will now require 3 pieces of information.

1. That the service is **Custom** (so select it from the drop-down list)
2. The server's **rtmp** address
3. The **Stream Key** name

Both the **rtmp** address and **Stream Key** are located in **external encoders** window on **Liveskies**

Go back to **Liveskies** screen and make sure that you are not broadcasting (it will say **Stopped!** Beside a red **Broadcast** button, don't worry about Video source)

We need to tell **OBS** (and give permission) where to send the **MallincamSky's** live video image. In the **Liveskies** window, place your mouse over the orange name of your channel. A pop-down list will appear.

Move the mouse to select **External Encoders**

*The **Broadcast Video** window will appear that contains all of the data needed for broadcasting. Only the first two lines **RTMP Address** and **Stream Name** contains the information OBS needs. What we need to do is copy the information (one piece at a time) and give it to OBS.*

Step 9 Click on the red **Copy** button next to the **RTMP Address** box

*This copies the **rtmp** address information*

Step 10 Go back to the **OBS** window and paste (ctrl-C) the location into the **server** box

Step 11 Go back to the **Liveskies Window** and click on the red **Copy** button for the **Stream Name**

Step 12 Go back to the **OBS** window and paste (ctrl-C) the location into the **Stream Key** box

Now click on **Apply** to **OK** these address locations on **OBS**.

Step 13 To start streaming just click on the **Start Streaming** button in the **OBS control box**

If everything is working, you will see a green box appear on the bottom of the OBS window.

To stop streaming, just click on the **Stop Streaming** button in the **OBS control box**

Viewing a Live Skies Channel

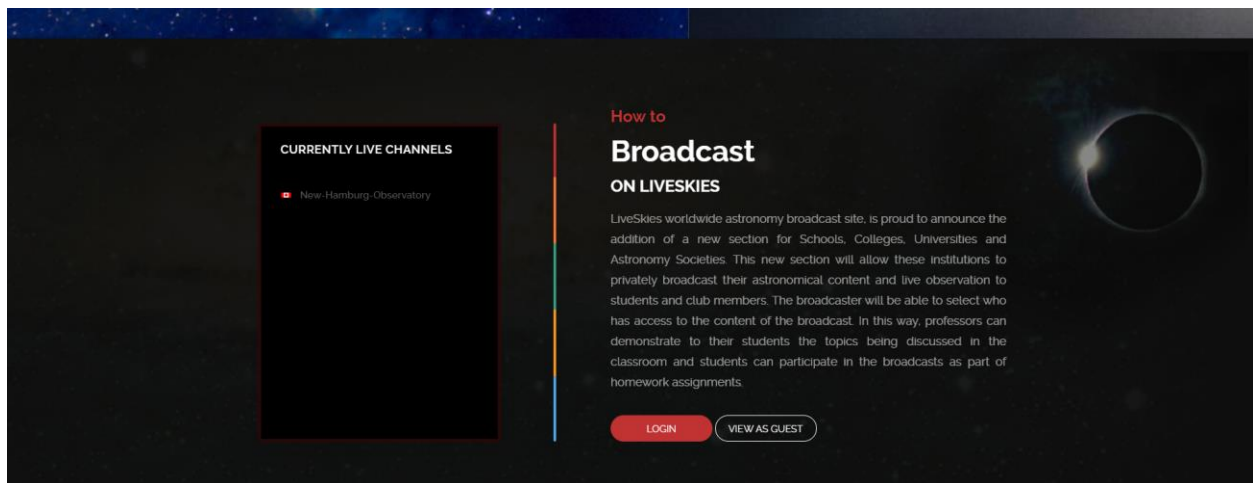

Logging into Liveskies

Visit <https://liveskies.org>

Below the main display Window of Liveskies is a list of the currently broadcasting channels

If you just want to watch and not participate in the Live Chat, just click on the **Channels** Button to display available channels to watch. Then just click on the channel image and you will be presented with the live channel.

If you want to participate in the Live Chat

Step 1

Click on the red **Login** button on the upper right of the window.

A login window will pop up

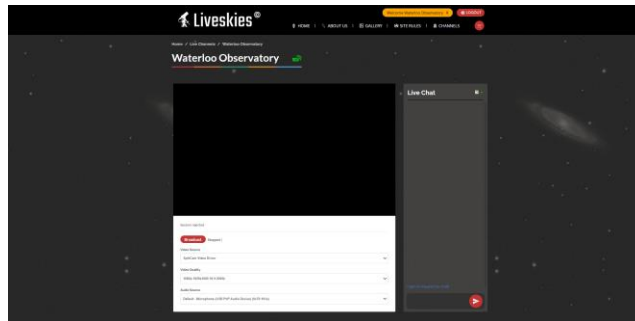

Step 2

Enter both your **Username** and **Password** and click on the red **Login** button.

LOGIN

*You can have **Liveskies** remember your credentials*

When you have successfully logged in, you will be presented with the main display and control window.

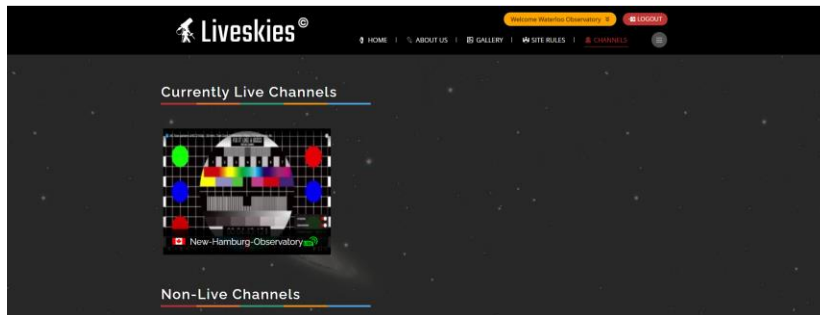

If you have previously broadcasted, Liveskies may automatically activate your broadcast channel

Step 3

Click on the **Channels** button at the top left of the Liveskies window

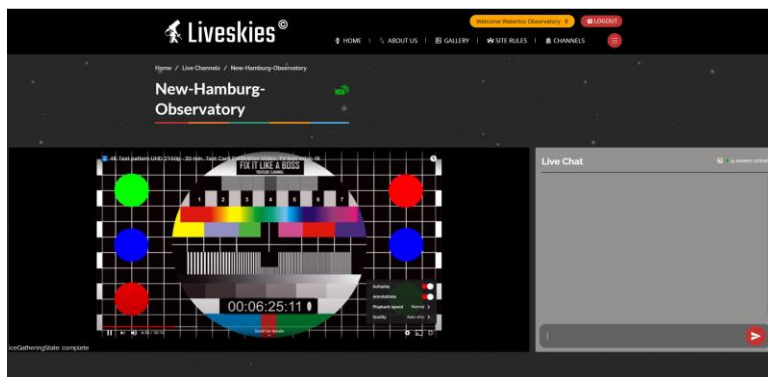

A list of available channels will be displayed

Step 4

Just click on that Channel and you will be presented with the channel and the Live chat window

➤ You can make the Broadcast Video Window full screen by clicking on the  located on the bottom right side of the Liveskies video window (you will not be able to see the Live Chat Window).

This is a great way to see the live broadcast in amazing detail, but you lose the Live Chat Window

➤ If you are using Google Chrome (or similar), use the zoom feature (3 vertical dots on upper right of browser) to increase size. Experiment by increasing zoom factor

For my monitor zoom 150 give me best video and Live Chat arrangement, zoom 300 placed Live Chat underneath Video window.

➤ You can pause the video stream by clicking on the 2 vertical bars on the lower left side of the Liveskies video window.

When you resume the video, it jumps to the current live video stream, not where you left off

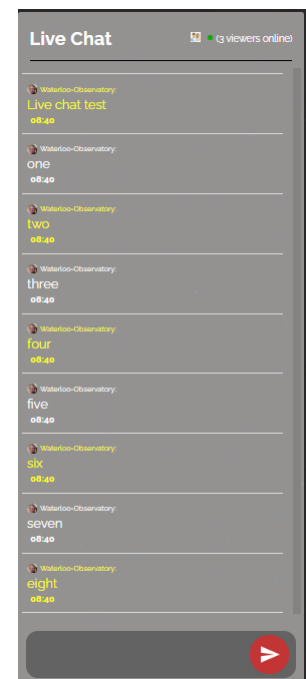

To Live Chat

➤ Just type your text in the entry box at the bottom of the Live Chat window and click on the red **delivery button** to the right of the entry box.

Your chat and other replies will display in the scrolling Live Chat window.

Clicking on the (Views Online) opens a Viewers List containing your current viewers.

Clicking on it again, closes the Views List

To exit

All you need to do is Log-Out by clicking on the red **LOGOUT** button on the top of Liveskies Window.

You can also click on the channels but to change channel if you require
